

Construction

The GEMÜ 653 / 654 manually operated 2/2-way metal diaphragm valve has a stainless steel bonnet and is available in two versions - GEMÜ 653 has a handwheel in high temperature and chemically resistant plastic, GEMÜ 654 a stainless steel handwheel. The handwheel is non-rising (except diaphragm size 8) and has a standard optical position indicator. The valve is available with two bonnet versions: Design D has concealed bolt mounting in the bonnet and is only suitable for 2/2-way bodies. Design T is suitable for T valve, Multi-port valve, Tank bottom valve and 2/2-way valve bodies.

Features

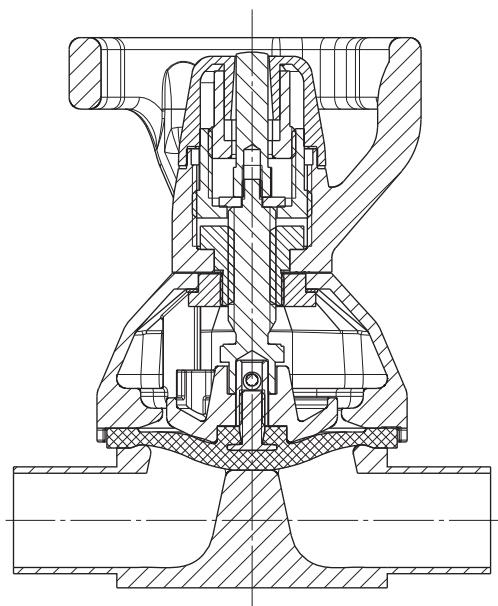

- Suitable for inert, corrosive*, liquid and gaseous media
- CIP/SIP cleaning and sterilizing capabilities
- Autoclave capability
- Insensitive to particulate media
- Surface finishes down to 10 µinch, electropolished
- Designed according to GMP (Good Manufacturing Practice)

Advantages

- The handwheel design allows minimal heat sink thus reducing the danger of burns injuries
- The service life of the diaphragm is increased to a maximum by the patented optional seal adjuster (US-patent 6,691,737 B2)
- Optional flow direction
- Installation for an optimized draining is possible
- Option
 - Lockable handwheel
 - Mounting for proximity switches for position feedback

Technical data

Working medium

Corrosive, inert, gaseous and liquid media which have no negative impact on the physical and chemical properties of the body and diaphragm material.

The valve will seal in both flow directions up to full operating pressure (All pressures are gauge pressures).

¹ The sterilisation temperature is valid for steam (saturated steam) or superheated water.

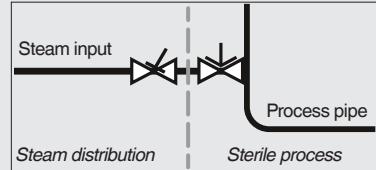

² If the sterilisation temperatures listed above are applied to the EPDM diaphragms for longer periods of time, the service life of the diaphragms will be reduced. In these cases, maintenance cycles must be adapted accordingly. This also applies to PTFE diaphragms exposed to high temperature fluctuations.

PTFE diaphragms can also be used as steam barriers; however, this will reduce their service life.

The maintenance cycles must be adapted accordingly.

GEMÜ 555 and 505 globe valves are particularly suitable for use in the area of steam generation and distribution.

The following valve arrangement for interfaces between steam pipes and process pipes has proven itself over time:
A globe valve for shutting off steam pipes and a diaphragm valve as an interface to the process pipes.

MG = diaphragm size

Cv values determined acc. to inlet pressure 75 psi, Δp 1 psi, stainless steel valve body (forged body) and soft elastomer diaphragm.

The Cv values for other product configurations (e.g. other diaphragm or body materials) may differ. In general, all diaphragms are subject to the influences of pressure, temperature, the process and their tightening torques. Therefore the Cv values may exceed the tolerance limits of the standard.

The Cv value curve (Cv value dependent on valve stroke) can vary depending on the diaphragm material and duration of use.

Availability of material code 42, F4: same as code 40

MG = diaphragm size

Special versions

Additional function A
with seal adjuster, stroke limiter
and mounting for proximity switches M 8x1

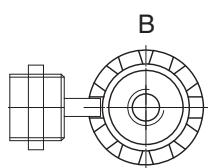

Additional function E
with seal adjuster, stroke limiter
and safety gland packing

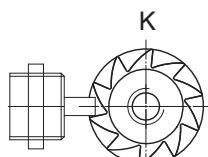

Additional function B, K, F

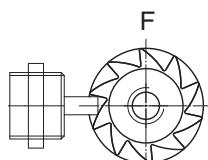

Types of locking devices

B
Mounting of
locking device (both directions), proximity switch possible

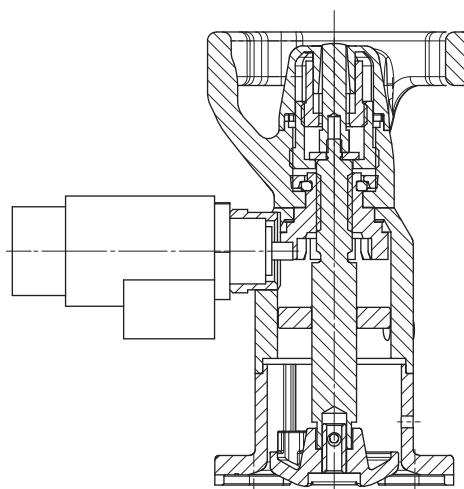

K
Mounting of
locking device to prevent opening, proximity switch possible

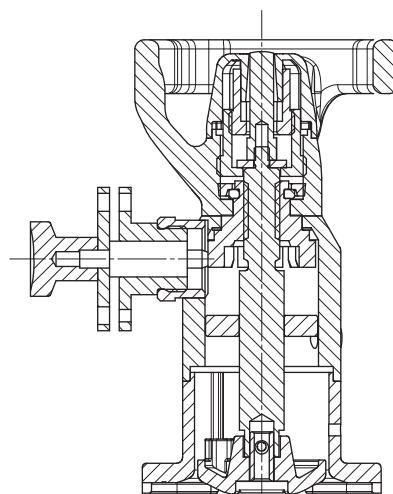

F
Mounting of
locking device to prevent closing, proximity switch possible

Type of accessory

MAG - Electrical locking device

LOC - Mechanical locking device

The solenoids, padlocks etc. for the "locking device" must be ordered separately as accessories.

Available only in connection with the bonnet additional functions B, K, F!
