

DIAPHRAGM PACKAGING

CHANGE NOTIFICATION

September 2020

NEW PACKAGING

GEMÜ is changing the packaging of our diaphragms. There will be two versions available. The image on the left shows the individually packaged version that has the suffix P01 at the end of the part number. This diaphragm comes complete with labels containing the following information: Part number, Material grade, Diaphragm size, Item number, Order number, Lot number, Production order number, Production date, Expiration date, Material batch number, Part name, as well as an extensive certificate of compliance.

The second version, shown in image on the right, will be individual diaphragms packaged together in one bag with a label containing the following information: Part number, Material grade, Diaphragm size, Item number, Quantity, and the Order number, without a documentation package. The delivery time for the individually packaged diaphragms will generally take about two weeks to ship after receipt of order. Customers that need the individual packaging and certification need to plan accordingly. During the transition to our new packaging method you may still receive individually bagged diaphragms with a silver label with the Item number, Part number and year. Should you have any questions or concerns please feel free to contact GEMÜ directly or via your local distributor.
